Senior Backend Engineer at **IFS** — building distributed systems that power industrial AI.

HE /
HIM

▸ CURRENTLY

Engineering on **IFS Loops** — autonomous Digital Workers that don't just recommend, they execute. End-to-end industrial workflows running inside enterprise systems with full governance and auditability.

PROFILE

Backend engineer focused on **scalable, high-performance distributed systems** for enterprise-grade AI and cloud platforms. Six years across the stack — Java, Spring Boot, microservices, REST, and full-stack Angular work — with a bias toward **reliability, performance, and clean architecture**. Happiest debugging a gnarly system-design tradeoff or shaving p99 latency off a critical path.

EXPERIENCE

Senior Software Engineer

FEB 2026 — PRESENT

IFS · Full-time · San Francisco Bay Area · On-site

- Backend engineer on **IFS Loops**, the company's industrial AI platform shipping autonomous Digital Workers across procurement, inventory replenishment, dispatch coordination, and order management.
- Designing and building **scalable, high-performance distributed services** for enterprise-grade AI and cloud workloads — operating inside customer ERPs with strict governance and auditability.
- Working at the seam where AI agent execution meets production systems of record — focused on reliability, throughput, and clean architecture.

Full-stack Developer

NOV 2021 — FEB 2026

Hughes Network Systems · Contract · Germantown, MD · Remote

- Designed and shipped end-to-end web applications — **front-end, back-end, database, deployment** — on enterprise platforms reaching thousands of customers.
- Cut load times by **25%** by profiling hot paths, eliminating render-blocking work, and refactoring inefficient query patterns.
- Drove integration of front-end (Angular/JavaScript) with Java services and REST APIs, with continuous attention to UX responsiveness.
- Set the bar for code reviews and engineering standards; ran spikes on emerging tools to bring proven ideas back into the platform.

iTradeNetwork, Inc. · Contract · Dublin, CA

- › Built microservices on **Spring Boot / Java 8**, applying core J2EE patterns (Singleton, Factory, MVC, DAO, Business Delegate) and Java 8 streams + lambdas across the codebase.
- › Led the migration of a SaaS product from **ColdFusion 8 → Java 8 / Angular**, modernizing both runtime and front-end.
- › Stood up **CI/CD with Jenkins**; instrumented service testing and virtualization with SOAP UI and Postman.
- › Persistence via Hibernate annotations + Spring Boot against SQL Server; tuned PL/SQL on Oracle and authored DB triggers for audit trails.
- › Centralized logging via **Logback + Google Stackdriver** on GCP for production observability.

Centillionz · Full-time

- › Designed and maintained **RESTful APIs** using Java, Spring Boot, and Hibernate for enterprise business modules.
- › Implemented CRUD flows with disciplined exception handling and validation; tuned SQL and stored procedures for read efficiency.
- › Wrote unit and integration coverage with **JUnit and Mockito**, plus internal technical documentation that outlived the sprint.

Prosurix, Inc. · Internship · Buffalo, NY · Remote

- › Built **Android applications** that automated manual data collection and reporting workflows for field teams.
- › Integrated **Google Maps APIs** and geocoding for location-aware data retrieval and smart navigation.
- › Shipped a QR-code-driven inventory tracking module; ran usability tests and folded feedback into UI iterations.
- › Backend in **Python (Flask) + MySQL** with secure data storage and retrieval.

EDUCATION

University at Buffalo
Bachelor of Science · Computer Science

CERTIFICATIONS

Generative AI Essentials
EchoStar AI Academy
ISSUED DEC 2025

TOOLKIT

LANGUAGES
Java, JavaScript, TypeScript, Python, SQL, PL/SQL

BACKEND
Spring Boot, Spring Framework, Hibernate, REST APIs, Microservices, Java 8 Streams & Lambdas

FRONT-END
Angular, JavaScript, HTML / CSS

DATA
SQL Server, Oracle, MySQL, Stored Procedures, Triggers, Query Optimization

CLOUD / DEVOPS
Google Cloud (GCP), Stackdriver, Jenkins, Maven, CI/CD, Tomcat

TESTING
JUnit, Mockito, Postman, SOAP UI, Service Virtualization

PRACTICES
System Design, Distributed Systems, Agile / Scrum, Code Review, Generative AI
